

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

Listing of Claims

1. (Currently Amended) An information picture utilization apparatus comprising:

a client apparatus for sending notification regarding recording of an information picture and for sending information specifying the information picture comprising picture information and related information, wherein the picture information includes picture image data and the related information includes program information; and

a server apparatus for receiving the notification regarding the recording of the information picture,

~~wherein the client apparatus sends information for specifying the information picture by utilizing picture information and related information,~~

~~wherein the information for specifying the information picture causes a predetermined operation to be processed as a single unit when an operation command is given,~~
and

~~wherein the predetermined operation is one or more instructions, and~~

~~wherein each of the one or more instructions is processed as a function of each operation processed in accordance with the related information upon execution of a specific operation instruction~~the operation command, and

wherein each of a plurality of operation commands comprise a specific
predetermined operation and instructions.

2. (Previously Presented) The information picture utilization apparatus as set forth
in claim 1, wherein

said information picture includes time limit information in said related
information; and

said client inhibits execution of the notification to the server by interpreting said
time limit information.

3. (Previously Presented) The information picture utilization apparatus as set forth
in claim 1,

wherein said information picture includes time limit information in said related
information; and

said client inhibits execution of a predetermined operation by interpreting said
time limit information.

4. (Previously Presented) The information picture utilization apparatus as set forth
in claim 1,

wherein said client inhibits execution of the notification to the server on the basis
of operation history based on the information picture.

5. (Currently Amended) An information picture utilization apparatus comprising:

a client apparatus for sending a notification regarding recording of an information picture and for sending information specifying the information picture comprising picture information and related information, wherein the picture information includes picture image data and the related information includes program information; and

a server apparatus for receiving the notification regarding the recording of the information picture,

wherein the information picture is sent and recorded into said server apparatus by utilizing picture information and related information,

wherein the utilization of the picture information and the related information causes a predetermined operation to be processed as a single unit when an operation command is given, and

wherein each of the one or more instruction is processed as a function of the related information upon execution of the operation command, and

wherein each of a plurality of operation command comprise a specific predetermined operation and instructions, wherein the predetermined operation is one or more instructions, each operation processed in accordance with the related information upon execution of a specific operation instruction.

6. -13. (Canceled)

14. (Currently Amended) An information picture management apparatus for carrying out management of an information picture in which picture information and related information for prescribing processing of a predetermined operation are caused to be one handling unit, which is delivered to an information terminal connected through network,

wherein said information picture management apparatus comprises:

a registration information recording unit for recording registration information relating to information picture delivered to the information terminal and registered;

an updating permission/negation unit for determining permission/negation of updating with respect to information picture caused to undergo management by the registration information in accordance with updating condition set in advance; and

an information picture updating unit for updating processing with respect to information picture determined to be permitted by the updating permission/negation section,

wherein, each of the one or more instruction is processed as a function of the related information upon execution of the operation command, wherein the picture information includes picture image data and the related information includes program information, and

wherein each of a plurality of operation command comprise a specific predetermined operation and instructions.

~~wherein the predetermined operation is one or more instructions, each operation processed in accordance with the related information upon execution of a specific operation instruction.~~

15. (Previously Presented) The information picture management apparatus as set forth in claim 14,

wherein information pictures within the range from the number where at least one of registration and updating of the information picture is approximately a time up to a predetermined number should be updated as the updating condition.

16. (Previously Presented) The information picture management apparatus as set forth in claim 15,

wherein predetermined numbers are set with respect to respective ones of plural information terminals, and are changed in accordance with change instructions from the information terminals.

17. (Currently Amended) A computer-readable medium for storing a program for allowing a computer to execute a data processing method, said method comprising the steps of:

recording registration information relating to information picture delivered to the information terminal and registered;

determining permission/negation of updating with respect to information picture caused to undergo management by the registration information in accordance with updating condition set in advance; and

updating processing with respect to information picture determined to be permitted by the updating permission/negation section,

~~wherein information for specifying the information picture causes a~~
predetermined operation to be processed as a single unit when an operation command is given,

wherein, each of the one or more instruction is processed as a function of the
related information upon execution of the operation command, wherein the picture information
includes picture image data and the related information includes program information, and

wherein each of a plurality of operation command comprise a specific
predetermined operation and instructions.

~~wherein a predetermined operation is one or more instructions, each operation~~
~~processed in accordance with related information upon execution of a specific operation~~
~~instruction.~~

18. (Previously Presented) The computer-readable medium for storing a program
as set forth in claim 17,

wherein predetermined numbers are set with respect to respective ones of plural
information terminals, and are changed in accordance with change instructions from the
information terminals.

19. (Previously Presented) The computer-readable medium for storing a program
as set forth in claim 17,

wherein predetermined numbers are set with respect to respective ones of plural
information terminals, and are changed in accordance with change instructions from the
information terminals.
